Legend

-  Bike Lane
-  Multi-Use
-  Recreation Path
-  Bike Route

 Multi-use Paths are paved or gravel rights-of-way separated from streets. These paths are shared with pedestrians and are wider than standard sidewalks (3m+).

 Bike Lanes are on-street facilities designated for cyclists using stripes and stencils. Bike lanes may include buffer striping to provide greater separation between cyclists and parked or moving vehicles. Bike lanes are the preferred treatment for all arterial and collector streets on the bikeway network, and not typically installed on low-volume, low-speed residential streets.

 Bike Routes are streets designated for bicycle travel and shared with motor vehicles. While the only required treatment is signage, streets are designated as bike routes because they are suitable for sharing with motor vehicles and provide better connectivity than other streets.

 Recreational Paths are trails that can be used by pedestrians/hikers and mountain bikes. The trails take advantage of the natural topography and may be equipped with boardwalks, lookouts, stairs and way-finders.
